

Kyriba Open Formats Studio

The Industry's First Self-Service Payment Formats Library

The Kyriba Open Formats Studio (OFS) offers a complete set of self-service tools to quickly implement, test and deploy payment formats within the Kyriba Payment Hub. Easy to use and explore, our extensive format library provides a Sandbox environment for registered users to customize and manage new payment formats.

Who Can Benefit from Kyriba OFS?

- IT specialists
- Payments and TMS implementation consultants
- Advanced treasury or payments experts
- Anyone who regularly works with payment formats

What Can You do with Kyriba OFS?

- Implement formats for new payment types
- Modify existing formats
- Test format variants with a single click
- Verify newly implemented payment formats

Overview of the Available OFS ToolKit

Formats List	Formats List
Bank/Country Matrix	Find payment scenarios currently supported in Kyriba
Alias Library & Statistics	Search all available variants for each format/subformat in Kyriba
Simulation Tool	Simulate output bank files from Kyriba Formats Library and test different alias combinations
Post-processor Tool	Test and validate new SWIFT MT and ISO 20022 post-processing rules
Comparison Tool	Compare and highlight the differences between the output bank files obtained from tests
Script Testing Tool	• Create Python scripts with the available samples and template library, or simply use embedded ChatGPT • Test and validate the results before incorporating them into various workflows
