

Kyriba Marketplace

KYRIBA FACT SHEET

Kyriba helps companies manage their liquidity, through a unified set of innovative products across treasury, risk, payments, working capital and connectivity. The Kyriba Marketplace is an API-driven global liquidity network offering apps, data and connectivity to our customers, partners and developers.

Developer Portal

The Kyriba Developer Portal is the hub for both clients and developer partners to access tools and guides in order to build or integrate new applications on Kyriba.

Registration is free of charge with immediate access to:

- API catalogue
- API documentation via Swagger
- API samples on Postman
- Change logs
- Use case examples
- Forum, news and support
- App publishing on Marketplace

App Marketplace

Kyriba's App Marketplace offers a quick path to expand and extend on a platform's capabilities. With a deep understanding of financial leaders' business needs, Kyriba forms partnerships with best-in-class fintech solution providers to innovate and enhance the Kyriba offering with new apps that shorten time to market.

Examples of apps include:

- Connectivity
- Funding and Investments
- FP&A
- E-invoicing
- Supply Chain and Inventory
- Payroll

APIs are the catalyst for real-time treasury and finance, enabling CFOs and treasurers to make better, more informed decisions.

The Kyriba Open API Platform

The launch of the Developer Portal marked Kyriba's first step towards its vision to create a marketplace, where Fintech partners, enterprise clients, and global banks are brought together to create a brand new experience for corporate finance, fully integrated on one open platform.

While other providers may offer APIs as additional features, Kyriba has taken an API-first approach. Fintechs who join this rapidly expanding open liquidity network have over 2500 global enterprises as potential clients. Given the extensiveness of corporate finance use cases, including treasury and risk, payments, supply chain finance and connectivity, there are unlimited opportunities to monetize innovation.

API Enabled Experience

For corporate CFOs and CIOs, APIs enable the interconnection of multiple financial applications, workflows and datasets to make composable financial systems a reality.

Examples of use cases enabled by API:

- AML and compliance
- Cash optimization
- Investment or trade management
- Supplier onboarding
- User and account orchestration
- Multi-ERP integration
- Fraud detection and security enhancement
- And many others
